PROJECT

Online pharmacy store

- Develop a web application using Java and HTML/CSS and Javascript
- Create a secure login system that allows customers to create accounts, log in, view their order history, update their personal information.
- Integrate the application with existing inventory systems so that customers can easily check availability of products before ordering them online.
- Design a database schema suitable for storing customer details including name, address, phone number etc., along with product details like price list, quantity available etc,
